REISSUE APPLICATION DECLARATION BY THE INVENTOR

Docket Number (Optional)

As a below named inventor, I hereby declare that:

My residence, mailing address and citizenship are stated below next to my name.

I believe I am the original, first and sole inventor (if only one name is listed below) or an original, first and joint inventor (if plural names are listed below) of the subject matter which is described and claimed in patent number 6,054,198, granted April 25, 2000, and for which a reissue patent is sought on the invention entitled Conformal Thermal Interface
Material For Electronic Components

the specification of which

☒ is attached hereto.

☐ was filed on _____ as reissue application number _____ / _____
 and was amended on _____
 (If applicable)

I have reviewed and understand the contents of the above identified specification, including the claims, as amended by any amendment referred to above.

I acknowledge the duty to disclose information which is material to patentability as defined in 37 CFR 1.56.

I verily believe the original patent to be wholly or partly inoperative or invalid, for the reasons described below. (Check all boxes that apply.)

☐ by reason of a defective specification or drawing.

☒ by reason of the patentee claiming more or less than he had the right to claim in the patent.

☐ by reason of other errors.

At least one error upon which reissue is based is described below. If the reissue is a broadening reissue, such must be stated with an explanation as to the nature of the broadening:

1. As issued, independent claims 1 and 9 of U.S. Patent No. 6,054,198 ("the '198 patent") recite a phase change material (PCB) which is formulated as a blend of at least one resin or wax component and at least one thermally-conductive filler.
2. It is possible, however, that those claims might be construed, depending upon the prevailing rules of claim construction then in effect, as excluding formulations based on mixtures of one or more resins and one or more waxes.
3. In fact, the specification as filed of the '198 patent describes at col. 8, ll. 16-65 a representative embodiment which is based on a mixture of a resin, namely a PSA component, and a wax, namely an α -olefinic thermoplastic component such as Vybar® 260;
4. Although not termed a "wax" in the specification, α -olefinic thermoplastics such as Vybar® 260 are generally considered to be waxes and are referred to as such in the following issued U.S. Patent Nos. (copies of which are annexed hereto): 4,217,320 [See col. 2, ll. 59-68]; 4,515,740 [See col. 7, ll. 58-63]; 5,994,020 [See col. 13, ll. 47-63]; and 6,080,800 [See col. 7, ll. 29].
5. The accompanying preliminary amendment therefore amends claims 1 and 9 to expressly include PCB formulations which are mixtures of resins and waxes.
